

Accuracy, Modularity, Price... spec by spec the 4708 is right on target!

With total 1 year $\pm 5^\circ$ accuracies to 4.7ppm DCV and 40ppm ACV, the 4708 Multifunction Standard from Datron Instruments is the world's most advanced programmable calibrator.

As instrument manufacturers push calibration requirements ever higher, the unrivalled levels of performance and capability the 4708 provides, ensures that your calibration investment today will be viable in the future.

If your current requirements do not include all functions, the 4708 can be supplied in DCV only, ACV only, or DCV and ACV configurations; the addition of the Resistance and Current

option makes the unit fully multifunctional. IEEE-488 is fitted as standard and, of course, any option can be retrofitted as required.

The 4708 features a cost effective built-in wide bandwidth 1000V amplifier with a capability of supplying 1000V at 33kHz or 750V at 100kHz. This enables the wide range of hand held, bench or systems DMMs requiring calibration at high voltage and high frequency to be handled without extra equipment cost. Full compatibility with Datron's high current calibration products and calibration software gives the 4708 even greater flexibility.

The 4708 is available now at a very affordable price. For full details and a fact-filled brochure call us today.
